

IsoTek (Limited Edition) Eternal Power Cable

DATA SHEET

Overview

Pure 2.0sqmm silver plated 6N oxygen free copper for better conductivity and greater amperage. Thicker conductor strands improve performance. Fluorinated Ethylene Propylene (FEP/ Teflon) allows increased performance. Multi-strand cotton filler mains dielectric constance, these are surrounded by a Maylar wrap which improves Common Mode noise rejection and maintains cable structure. And oxygen free copper braid increases Common Mode (RFI) noise rejection, and finally the cable is sealed in a flexible PVC jacket.

Length: 1.5m
