

# MCD600 s a c d / c d p l a y e r

- At the heart of the MCD600 is a newly designed digital circuit highlighted by a new premium 8-channel, 32-bit PCM/DSD digital-to-analog converter (DAC).
- The DAC is used in Quad Balanced mode, with 4 DAC channels allocated to each of the left and right audio channels, resulting in truly exceptional sound reproduction.
- All PCM signals are up-sampled up to 32-bit/384kHz.
- The included variable outputs combined with volume control allow the MCD600 to be connected directly to your amplifier without needing a preamplifier.
- All common disc types can be played. Besides commercial SACDs and CDs, popular file formats can be played from user generated CD or DVD Data Discs and USB flash drives.
- Disc handling is smooth and quiet thanks to an advanced disc transport with a precision die-cast aluminum tray.
